One of the most important parts of the brain; the medulla controls breathing and heart functioning. The medulla is part of the brainstem.

Also known as the circulatory system, the cardiovascular system is responsible for delivering blood throughout the body, which provides oxygen and nutrients to all of our cells. The heart is the most important organ within the cardiovascular system, responsible for pumping blood throughout the body.

The brainstem connects the rest of the brain to the spinal cord and helps control basic body functions like breathing, swallowing, blood pressure.

The sometimes deadly overdose of alcohol; it occurs when there is so much alcohol in the body that the areas of the brain that control basic life-sustaining functions, like the medulla, begin to shut down.

This system regulates your breathing. It includes the nose, throat, windpipe, voice box, and lungs.
